- Height of backrest : 73cm.
- Height of seat from ground : 50cm.
- Depth of Seat : 49cm.
- Width of seat : 52cm.

Gravity is a great thing, it keeps us grounded, but it can also weigh down on our health. We all know that when we are upright or sitting down, gravity places pressure on the spine, and in turn cause discs to compress and spinal muscles to contract to help maintain balance. To counter the effects, you need to sit in Space. As its moniker suggests, this chair gives you a feeling of floating in space by tilting into a position which doctors recommend as the healthiest way to sit. It features a dual motor operation, giving you control of the back and the footrest separately, allowing you to optimize your seating position to meet your particular comfort needs when the zero gravity position is not required. Its sleek and slim design makes it perfect for smaller living environment or apartments. The one step central locking system makes it easy to manoeuvre and the waterproof upholstery makes cleaning a breeze.

Product Features

- Dual motor ergonomic designed Tilt-in-space action.
- Rotating a large range of angles and directions.
- Independent footrest operations.
- Rear Castors with central lock function by just one step.
- Powder coated stainless steel push handle.
- Comfort in seat and back aiding pressure management.
